Modernity and Malaysia Alberto Gomes 2007-05-16 Bringing together over thirty years of detailed ethnographic research on the Menraq of Malaysia, this fascinating book analyzes and documents the experience of development and modernization in tribal communities. Descendants of hunter-gatherers who have inhabited Southeast Asia for about 40,000 years, the Menraq (also known as Semang or Negritos) were nomadic foragers until they were resettled in a Malaysian government-mandated settlement in 1972. Modernity and Malaysia begins with the 'Jeli Incident' in which several Menraq were alleged to have killed three Malay, members of the dominant ethnic group in the country. Alberto Gomes links this uncharacteristic violence to Menraq experiences of Malaysian-style modernity that have left them displaced, depressed, discontented, and disillusioned. Tracing the transformation of the lives of Menraq resulting from resettlement, development, and various 'civilizing projects', this book examines how the encounter with modernity has led the subsistence-oriented, relatively autonomous Menraq into a life of dependence on the state and the market. Challenging conventional social scientific understanding of concepts such as modernity and marginalization, and providing empirical material for comparison with the experience of modernity for indigenous peoples around the world, Modernity and Malaysia is a valuable resource for students and scholars of anthropology, development studies and indigenous studies, as well as those with a more general interest in asian studies.

American Government Cal Jillson 2013 “An introductory American government textbook should do more than simply tell students that politics is relevant today, that it will affect their lives in meaningful ways. Students are best prepared to recognize this basic fact when they understand the bigger picture of how the system works, how it got that way, and what are the possibilities for change. Cal Jillson’s American Government: Political Development and Institutional Change shows students how the nation’s past is present in all aspects of contemporary politics, using the dynamics of change as a tool to understand how politics works and how institutions, systems, avenues of participation, and policies have evolved over time to produce today’s political environment in the United States. Going one step further, Jillson identifies the critical question of how American democracy might evolve further, focusing in every chapter on reform and change into the future”–

World Economic and Social Survey 2013 United Nations 2013 The 2015 deadline to meet the targets of the Millennium Development Goals is fast approaching. There has been significant progress, but it is uneven. Meanwhile the context within which development goals are pursued has become much more challenging, visible in the recent food, fuel and financial crisis. Environmental degradation, demographic changes and persistent inequalities further threaten progress. This publication will discuss new directions and policies at the national and international level to achieve transformative change and sustainable development post-2015.

Global Economic Prospects, June 2021 World Bank 2021-08-03 The world economy is experiencing a very strong but uneven recovery, with many emerging market and developing economies facing obstacles to vaccination. The global outlook remains uncertain, with major risks around the path of the pandemic and the possibility of financial stress amid large debt loads. Policy makers face a difficult balancing act as they seek to nurture the recovery while safeguarding price stability and fiscal sustainability. A comprehensive set of policies will be required to promote a strong recovery that mitigates inequality and enhances environmental sustainability, ultimately putting economies on a path of green, resilient, and inclusive development. Prominent among the necessary policies are efforts to lower trade costs so that trade can once again become a robust engine of growth. This year marks the 30th anniversary of the Global Economic Prospects. The Global Economic Prospects is a World Bank Group Flagship Report that examines global economic developments and prospects, with a special focus on emerging market and developing economies, on a semiannual basis (in January and June). Each edition includes analytical pieces on topical policy challenges faced by these economies.

"Sustainability" possesses numerous meanings for different people and various circumstances and it is a common mistake to define sustainability strictly in terms of "environmental sustainability". 

Jonathan Neufeld illustrates how they actually descend from the physical and biological sciences rather than from student/teacher relationships. Neufeld’s in-depth analysis of economic trends during the 20th century shows how economic and educational reforms are closely related. He demonstrates how the century-long movement to develop teachers became obsessed with turning them into soldiers of a failing economy. This book rewrites the existing foundations and outlines a future direction that will excite researchers and practitioners alike. It introduces alternative theoretical foundations and propositions to inspire innovative discussions about teachers’ continuing educational development and what it could mean to teach children in classrooms. Since the publication of A Nation at Risk in 1982, "teacher development" has become a universal term, used to express an international movement to professionalize teachers. But imagine if the foundations of this research had little to do with life in the classroom. How would we then begin to discover what "development" means to practising teachers? Redefining Teacher Development will appeal to researchers in teacher instruction and development, as well as practising teachers with an interest in how research has conceptualised their field.

Mr. Tim Callen 2014-12-23 Abstract: The economy of the six Gulf Cooperation Council (GCC) countries are heavily reliant on oil. Greater economic diversification would reduce their exposure to volatility and uncertainty in the global oil market, help create jobs in the private sector, increase productivity and sustainable growth, and help create the non-oil economy that will be needed in the future when oil revenues start to dwindle. The GCC countries have followed many of the standard policies that are usually thought to promote more diversified economies, including reforms to improve the business climate, the development of domestic infrastructure, financial deepening, and improvements in education. Nevertheless, success to date has been limited. This paper argues that increased diversification will require realigning incentives for firms and workers in the economies—fixing these incentives is the “missing link” in the GCC countries’ diversification strategies. At present, producing non-tradables is less risky and more profitable for firms as they can benefit from the continued availability of high-paying and secure public sector jobs discourages nationals from pursuing entrepreneurship and private sector employment. Measures to begin to address these incentive issues could include limiting and reorienting government spending, strengthening private sector competition, providing guarantees and financial support for those firms engaged in export activity, and implementing labor market reforms to make nationals more competitive for private sector employment.
